

KATERA STEEL OY

CONTRACT MANUFACTURING - SUBCONTRACTING - STEEL STRUCTURES - INSTALLATIONS

WE MANUFACTURE HIGH QUALITY STEEL PRODUCTS FOR THE NEEDS OF MINING INDUSTRY

Katera Steel Oy manufactures high quality products for mining industry. Our core competencies are demanding high quality metalwork (sheet metal work, welding, machining), assembly work and installations of machines / steel structures including electrical and hydraulic work. Thanks to our parts manufacturing department as well as our assembly and installation capability we guarantee our customers with accurate full house service. And when needed we also make turnkey deliveries for our customers. We have a lot of experience in working in mining environments and our ISO 9001-2015 to EN 1090 certifications ensure the top quality work and service

Conveyor and pipe bridges and rollers for conveyors

During our nearly 60-year history we have manufactured and delivered a large number of conveyor and pipe bridges of various sizes for example for mining industry. Katera Steel Oy also designs and manufactures standard model and special model folding and drive rollers for all types of belt conveyors. We also repair used rollers (bearings and sheets and ends of rollers).

Steel frameworks for buildings, maintenance platforms, feed hoppers, etc. steel structures

We can provide all kinds of steel structures, such as building frames, feed hoppers, maintenance platforms, walkways, installation platforms for various machines, etc. according to customer drawings. The EN 1090 certificate also enables us to weld very demanding structures. Most of our work is based on welding of normal structural steels, but we also weld stainless steel.

Technical equipment facilities and containers

We manufacture both insulated and uninsulated equipment facilities tailored to our customers (eg heat and other containers, technical equipment facilities rooms for the use of electricity and telephone companies, as well as for many other needs, including pumping station buildings). If necessary, we equip the equipment rooms with electricity, heating, ventilation, air conditioning, etc., based on the needs of our customers.

CONTRACT MANUFACTURING – SUBCONTRACTING – STEEL STRUCTURES - INSTALLATIONS

Pumping platforms, barriers, docks, bridges and others floating steel pontoon structures

For decades, we have been manufacturing floating pontoon structures for a wide range of purposes (eg docks, bridges and pontoon guides, eg. for the needs of the forest industry). By combining an isolated equipment container and a steel pontoon bridge, a highly efficient floating pumping station is made. By following the turnkey delivery principles, we manufacture the right-sized stations which fit the needs of our customers. On request, we can also install the station to its final destination. In principle, the floating platform can be made in whatever size, but for example by using the bottom size 10 m x 4 m enables to get 2000 – 3000 m³/h pumping capacity (2 - 4 pcs of pumps).

Contract manufacturing, subcontracting and installations

We offer a complete service that includes the parts manufacturing and the final assembly of parts into ready machines and equipment. We are professionals in both subcontracting and contract manufacturing. In addition to the manufacture of steel structures, we also do versatile installation work. Machine manufacturers, all kind of industry, and many other companies get a comprehensive service from us, which includes also mechanical, hydraulic, pneumatic, automation and electrical installations. We have several partner companies for which we operate as a production department. We also have the space and the opportunity to test run the machines. Logistics costs are reduced and extra work is reduced when the functionality of the equipment can be tested during manufacture before the machines and equipment are delivered to their customers, which locate in foreign countries, even in the Far East and South America.
